Professional Summary

Experienced IT Support Engineer with demonstrated expertise in enterprise infrastructure management, security operations, and network architecture. I am currently employed at Informal IT Ltd, where I leverage my deep technical knowledge to deliver robust IT solutions and maintain critical business systems. Good Microsoft O365 administration experience and very

My approach combines strong technical capabilities with strategic problem-solving, enabling me to manage complex infrastructures while ensuring optimal performance and security. I maintain extensive VPS infrastructure on OVH hosting, featuring multiple Debian servers with advanced mesh networking, enterprise-grade monitoring, and comprehensive security implementations.

Specializing in hybrid cloud environments, Active Directory/Entra ID integration, Linux systems administration, and defense-in-depth security architectures. This is a passion project as I really do enjoy learning as I go, predominately in my own time. I am currently working on learning Wazuh SIEM for monitoring active threats on my network. I also approach Microsoft O365 in same way as I run my own exchange server through my personal tenant this provides an excellent platform for testing.

A big part of my experience is soft skills, this gained from many years providing telephone support, helping clients' breakdown their technical issues and providing a prompt resolution. This is an aspect of this industry I enjoy immensely as there is a distinct sense of accomplishment when helping a nontechnical person with solving a technical issue.

Often the only reason I can be successful in providing support is with the full co-operation of whom I am speaking to. Thus, relationships and trust building are vital for the process of succeeding, fixing the issues is dependent on the soft skills I can apply. It is not possible for me to always be there physically with clients.

Professional Experience

Informal IT Ltd | IT Support Engineer.

London, W1B 5AW | October 2025 – Present

Providing comprehensive IT support and infrastructure management for diverse client environments. Responsible for maintaining enterprise systems, implementing security protocols, and ensuring business continuity through robust backup and monitoring solutions. Provide 1st rate technical support To clients keeping to SLA and policy based support times.

Key Responsibilities:

- Managing hybrid working infrastructure and remote support capabilities
- Implementing and maintaining enterprise security solutions
- Delivering technical solutions within agreed SLAs and operational requirements
- Direct and indirect client support by phone and in person
-

GMA Ltd | IT Support Engineer

London, Beckenham | January 2024 – October 2025

Delivered first and some second-line technical support, resolving complex hardware, software, and network issues. Managed system maintenance, monitoring, and troubleshooting while ensuring optimal performance across client infrastructures. O365 and 3CX being a major part of this work.

Key Technologies & Achievements:

- Mastered Autotask for integrated ticketing and workflow management
- Administered O365 tenants including Intune device management
- Managed Veeam backup infrastructure and recovery operations
- Configured and supported 3CX telephony systems with Fanvil X5S endpoints
- Pursued multiple certifications (CCNA, CompTIA A+, Azure, O365)

Testronic Labs | IT Engineer

London, Croydon | September 2023 – January 2024

Led SharePoint integration across company infrastructure, managed VDI implementations, and maintained network security through advanced VLAN configurations. Worked on Physical network preparation for major deployment to Manila for office.

Key Achievements:

- Architected SharePoint integration for local and remote systems
- Company wide asset audit that took 12 months to complete
- Deployed VDI solutions using Parsec and Azure
- Optimized network performance through strategic VLAN segmentation and network configuration
- Developed GPU parallelization techniques for virtual environments to pass through video via non virtualized video interfaces, a limitation with Parsec at the time.

Production VPS Infrastructure - OVH Hosting

Scale: Multiple Debian 12/13 servers | Architecture: Mesh networking with defense-in-depth security

Managing sophisticated multi-server VPS infrastructure featuring:

- *Networking: WireGuard and Tailscale mesh VPN topology for secure inter-server communication*
- *Security Stack:*
 - *Wazuh SIEM for centralized log management and threat detection*
 - *CrowdSec for collaborative web attack protection*
 - *Custom iptables/nftables/UFW rulesets with fail2ban integration*
 - *Regular security audits using custom PowerShell/Bash assessment scripts and Lynis audits*
- *Services Deployed:*
 - *Vaultwarden (Bitwarden-compatible password manager)*
 - *Containerized applications using Docker and docker-compose*
 - *Uptime Kuma for comprehensive service monitoring*
- *Recent Implementations:*
 - *Resolved critical telemetry visibility issues in Wazuh SIEM deployment*
 - *Hardened exposed management interfaces discovered during security audits*
 - *Configured Postfix email relay through Microsoft 365 with SASL authentication*
 - *Implemented IPv4-only mail routing to resolve M365 IPv6 rejection issues*

Enterprise Home Lab Environment

Hardware: Custom-built virtualization server | Platform: Proxmox VE with nested virtualization

Comprehensive testing and development environment including:

- *Active Directory Forest:*
 - *Multi-domain controller setup with sites and services*
 - *Hybrid Entra ID (Azure AD) synchronization*
 - *Complex GPO structures for security hardening*
 - *PowerShell automation for user lifecycle management*
- *Security Testing Platform:*
 - *Kali Linux with custom penetration testing toolkits*
 - *Vulnerable VMs for CTF practice and exploit development*
 - *Malware analysis sandbox environments*
 - *Network segmentation using VLANs for isolated testing*
- *Backup & Recovery:*
 - *Veeam B&R community edition with automated verification*
 - *Custom PowerShell scripts for backup monitoring and reporting*
 - *Disaster recovery procedures with documented RTOs/RPOs*

Linux Systems Administration

Primary Distributions: Debian 11/12/13, Ubuntu Server LTS

Extensive experience including:

- *System Hardening:*
 - *SSH key-only authentication with fail2ban*
 - *SELinux/AppArmor policy configuration*
 - *Automated security updates with unattended-upgrades*
 - *Regular vulnerability scanning and patching*
- *Service Management:*
 - *Systemd service creation and optimization*
 - *Process monitoring and resource management*
 - *Log rotation and centralized logging configurations*
- *Automation & Scripting:*
 - *Bash scripts for system maintenance and monitoring*
 - *Automated deployment scripts for consistent server provisioning*
 - *Integration with configuration management principles*

Technical Documentation Platform - blog.ajolnet.com

Technology: Hugo static site generator | Hosting: Self-managed with CI/CD

- *Design Implementation:*
 - Custom CSS with glassmorphism effects and dark theme
 - Responsive design with mobile-first approach
 - Hero carousel with IT history imagery
 - Sticky navigation with opacity transitions
- *Content Focus:*
 - Detailed system administration guides and tutorials
 - Security best practices and incident response procedures
 - Infrastructure automation techniques
 - Troubleshooting methodologies and case studies
- *Technical Features:*
 - Git submodule management for theme customization
 - Custom baseof.html templating with inline JavaScript
 - Performance optimization for fast page loads

Network Architecture & Security

Scope: Multi-site connectivity | Focus: Zero-trust principles

- *VPN Infrastructure:*
 - Site-to-site WireGuard tunnels between VPS nodes
 - Tailscale overlay network for simplified management
 - Split-tunnel configurations for optimized routing
- *Firewall Management:*
 - pfSense deployment with IDS/IPS rules
 - Complex NAT and port forwarding configurations
 - Traffic shaping and QoS policies
- *Monitoring & Alerting:*
 - Custom dashboard creation for infrastructure visibility
 - Automated alerting for security events and service failures
 - Performance metrics collection and analysis

Technical Expertise

Infrastructure & Security

- Virtualization: VMware vSphere, Proxmox VE, Hyper-V, Docker/Podman containerization
- Security: Wazuh SIEM, CrowdSec, pfSense, fail2ban, iptables/nftables, OpenVAS
- Monitoring: Uptime Kuma, Prometheus/Grafana, custom PowerShell/Bash monitoring
- Backup: Veeam B&R, rsync automation, snapshot management

Systems Administration

- Windows: Server 2016-2022, Active Directory, GPO, WSUS, PowerShell DSC
- Linux: Debian/Ubuntu administration, RHEL/CentOS, package management, kernel tuning
- Cloud: Entra ID, Intune, Microsoft 365, Azure fundamentals
- Email: Postfix, Dovecot, SPF/DKIM/DMARC configuration, M365 hybrid

Networking & Communications

- Protocols: TCP/IP stack, VLANs, BGP basics, IPv4/IPv6 dual-stack
- VPN: WireGuard, OpenVPN, Tailscale, IPsec
- VoIP: 3CX administration, SIP troubleshooting, QoS configuration
- DNS/DHCP: BIND9, dnsmasq, Windows DNS, dynamic DNS

Development & Automation

- Scripting: Advanced PowerShell, Bash, Python, batch scripting
- Web: HTML5, CSS3 (including modern effects), JavaScript basics, Hugo
- Version Control: Git workflows, GitHub Actions, submodule management
- IaC: Docker Compose, basic Ansible playbooks, Terraform fundamentals

Certifications & Training

- In Progress: CCNA, CompTIA A+, Azure Administrator Associate
- Self-Study: Linux Professional Institute materials, offensive security fundamentals
- Practical Experience: Regular CTF participation, home lab experimentation

Education

Bachelor of Computer Science, 2:2

University of Wales Trinity St David | 2011 – 2014

- Dissertation: Future CPU microarchitecture substrate materials
- Additional Qualifications:
 - HNC Mechanical Engineering – Merit (Pembrokeshire College)
 - HND Photographic Studies – Double Merit (Havering College)

Professional Attributes

- Problem Solving: Systematic troubleshooting methodology with comprehensive documentation
- Security Mindset: Defense-in-depth approach with continuous vulnerability assessment
- Continuous Learning: Active home lab with production-grade infrastructure for skill development
- Documentation: Clear technical writing with emphasis on reproducible procedures
- Collaboration: Effective communication across technical levels with stakeholder management
